

Mobile Threat Protection

A security solution for your mobile workforce to view and defeat evolving mobile threats

Overview

Lookout Mobile Threat Protection (MTP) is the only enterprise mobile security solution that can anticipate and defeat the next generation of mobile threats. With an easy-to-deploy endpoint agent on your employees' devices, Lookout provides real-time threat data to a centralised admin console, allowing you to enforce security policies and protect against advanced attacks.

Our security approach is unique in the market, leveraging our global sensor network of over 70 million users and applying our predictive security technology to stop threats before they exhibit malicious behaviour.

Consumers already love Lookout for mobile security, and we've optimised that experience for the enterprise through a lightweight mobile application that preserves battery life, alleviates privacy concerns, and can be distributed through your existing MDM solution. The result is best-of-breed security that does not impede business productivity, ensuring strong adoption across the organisation.

Highlights

Protection against advanced threats

Detect and remediate mobile threats such as surveillanceware, trojans, or data leakers

Detection of a compromised OS

Identify devices that have been rooted or jail broken, even if they bypass MDM detection

View all sideloaded apps on your network

View and approve iOS and Android apps that were installed outside of official app stores

Custom security policy

Create flexible security policies for user groups, such as executives or global workers

MDM integration

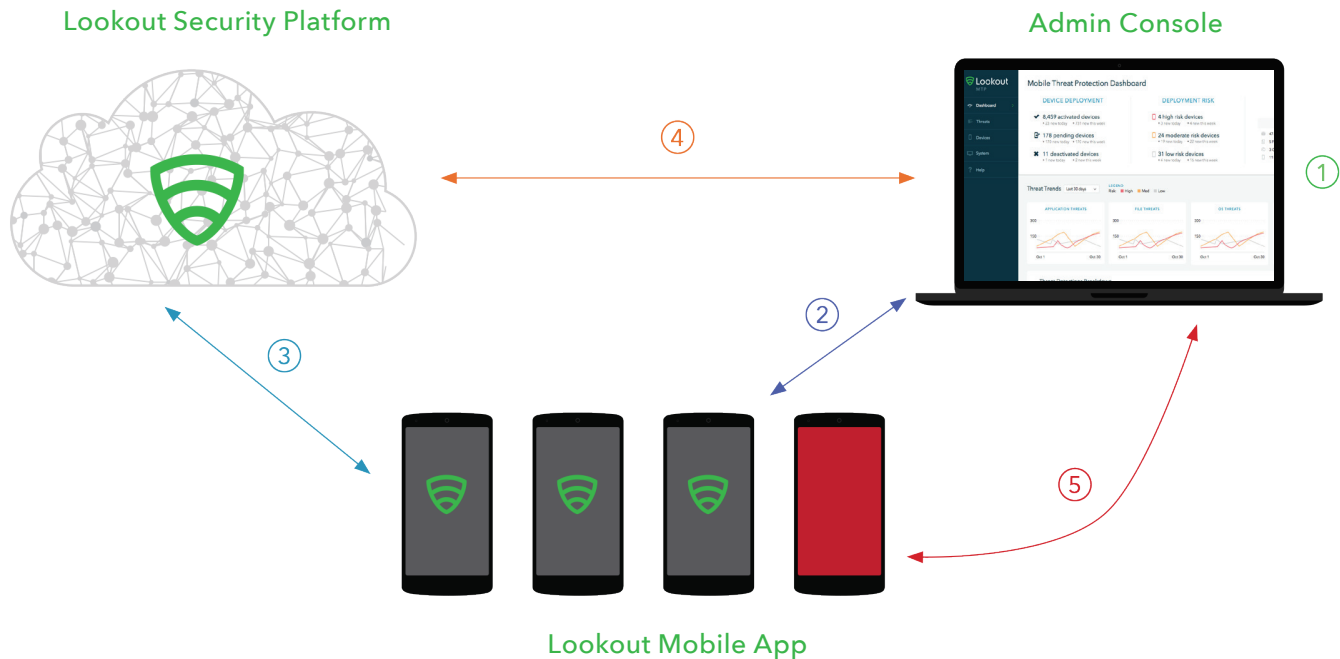

Connect with leading MDM solutions for simple device provisioning and quarantine

Lightweight iOS and Android app

Deploy a beautiful endpoint app that protects user privacy while securing corporate data

How It Works

Lookout’s Mobile Threat Protection is different from any other security product on the market. The solution consists of our unique predictive security technology, a lightweight app that users trust, and a customisable admin console that provides real-time visibility into threats and policy violations.

- ① Security policy creation: Within the admin console, the admin has the ability to define the organisation’s security policy and risk response actions
- ② Enrolling devices: Mobile devices are then seamlessly enrolled through the console or your MDM solution
- ③ Continuous endpoint telemetry: Devices communicate with the Lookout Security Platform in real time to identify risks across mobile apps and operating systems
- ④ Threat detection: The Lookout Security Platform uses our predictive security technology to notify admins of any threats before they exhibit malicious behaviour
- ⑤ Response: When threats or policy violations are discovered, Lookout triggers endpoint and cloud-based remediation based on your policy settings

The Lookout Difference

- Only Lookout acquires security data from over 70 million mobile users worldwide, with more than 11 millions apps in our mobile intelligence dataset
- Only Lookout uses predictive security technology to identify threats that signature or behaviour-based methods would miss
- Only Lookout has proven success in designing mobile security solutions loved by millions of users, resulting in high user adoption and lower TCO
