

inSync Private Cloud Plans

Druva’s inSync Private Cloud on-premise editions are tailored for enterprises that adhere to their own data security and compliance requirements. Built to scale, inSync offers the flexibility and the elasticity of the cloud and is a comprehensive IT solution for protecting and governing enterprise mobile data without compromising end-user productivity.

Solution Components

Endpoint Backup

- Enables continuous, seamless, and non-intrusive backup and restore for protecting critical business data wherever it resides. In addition, with persona backup, user settings are preserved for easy, managed migration to new machines or operating systems. inSync can be mass deployed and supports Microsoft Windows®, OS X®, Linux®, iOS, and Android™ devices.

inSync Share

- Delivers the security and controls required by IT to manage all sharing activities within and outside the organization while providing an intuitive and easy-to-use environment for effective user collaboration. It is supported on all mobile devices and enables quick access for users to all of their data from any device.

Governance

- Facilitates identification, collection, and preservation of endpoint data for compliance and litigation needs. Enables secure, direct data-access for eDiscovery platforms with complete metadata-based, federated search capabilities.

Advanced Storage Management

- Ensures High Availability (HA) through secondary destination support for automatic failover of backups and restores, ensuring zero downtime and continuous data access. Additionally, inSync offers the capability to dynamically add storage (with storage pooling and load balancing), thereby delivering scalability and support for organizations that anticipate increasing data needs of hundreds of thousands of users and petabytes of stored data.

Enterprise Integration

- **Microsoft Active Directory® Integration:** Connectivity to AD for the automatic provisioning, policy configuration, and deprovisioning of users and devices.
- **Integrated Mass Deployment:** Enables the automatic mass provisioning of inSync agents and configuration by supporting deployment tools, such as Microsoft Active Directory® Group Policy (GPO), Microsoft System Center Configuration Manager (SCCM), LANDesk®, and Casper Suite®, thereby eliminating the need for end user intervention.
- **Delegated Administration:** Enables administrators to create and assign privileges to other administrators for managing inSync across groups and regions.

Mobile Suite

- With the inSync mobile app, end users have direct access to all backed up content on the go, thus making it ideal for the mobile workforce. In addition, they can easily control mobile backup and protection preferences (backup content, schedule and remote wipe).
- Integration with Mobile Device Management (MDM) providers enables customers to manage the provisioning of the inSync app within the context of the MDM service, as well as achieve more extended security and management capabilities.

Data Loss Prevention (DLP)

- Enables remote data wipe (user or admin-initiated), geo-tracking, and enforced device encryption capabilities to protect data from being compromised in case an endpoint device were to get lost or stolen.

About Druva

Druva is the leader in data protection and governance at the edge, bringing visibility and control to business information in the increasingly mobile and distributed enterprise. Built for public and private clouds, Druva's award-winning inSync and Phoenix solutions prevent data loss and address governance, compliance, and eDiscovery needs on laptops, smart devices and remote servers. As the industry's fastest growing edge data protection provider, Druva is trusted by over 3,000 global organizations on over 3 million devices.
